

Abstract of the Disclosure

- An immunogen derived from a protein allergen, characterized
5 in that said immunogen comprises:
- a. a non-anaphylactic immunogenic recombinant fragment of
the protein allergen, said fragment containing an IgG
epitope partly but not wholly overlapping an IgE
epitope of the protein allergen
 - 10 b. a polymeric form of said fragment, in which form the
fragment constitutes the monomeric units;
 - c. a recombinant polymeric form of said protein allergen
in which the protein allergen constitutes the
monomeric units.
- 15 The use of the immunogen for in vitro diagnoses of type I
allergy and hyposensitization.
